

Join the Data Integration Era — Drive Efficiency and Profitability

Vendors and clients often struggle to manage an ever-increasing mix and volume of real-time, unstructured information. Yet, it's critical to connect and transform this data in order to be productive and profitable.

In the world of healthcare data, software vendors need to integrate their applications to accelerate delivery. Providers need to integrate and consolidate disparate applications from multiple vendors to eliminate redundancy and streamline efficiency.

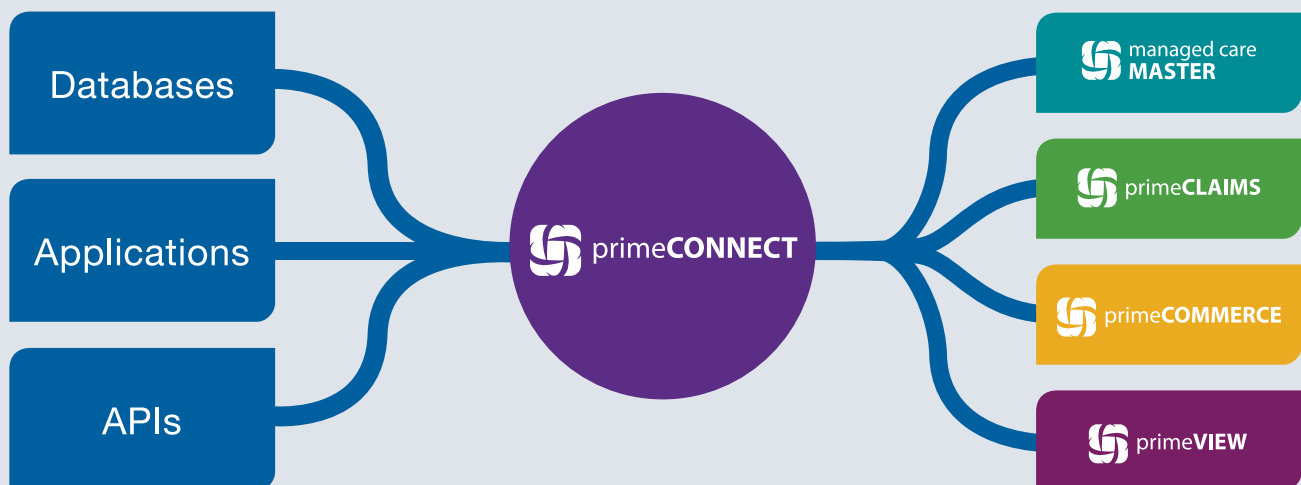

Customized, flexible, scalable.

Driven by a master database, primeCONNECT middleware synthesizes multiple data sources to automate your complex integration processes.

Moreover, because primeCONNECT isn't bound to a fixed system or existing file formats, it can flexibly solve vendor/provider interoperability challenges by generating custom solutions based on your needs, or using your existing templates.

Now you can reduce costs, simplify required reporting and more effectively use critical information.

- Enter data once, share it between apps
- Create one integrated view from all apps
- Automatically extract data from all apps for reports

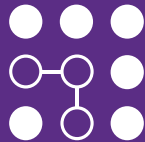

Battle tested.

Decades in the making, primeCONNECT now executes thousands of real-time data integrations – processing millions of transactions – through our primeCLAIMS, primeCOMMERCE, primeVIEW, and Managed Care MASTER applications.

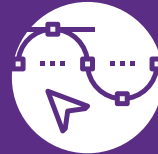

- Seamlessly integrate a variety of data sources
- Easily deploy custom integration modules

Open

- Quickly map and transform multiple data types and formats

Fast

- Build, deploy, and edit simple or complex integration workflows

Flexible

- Employ next-generation architecture to drive high-volume, real-time integrations

Scalable

DRIVE OPERATIONAL EFFICIENCY

The bottom line.

Take advantage of our 15+ years of integration and adaptation experience to create data continuity between vendors and clients. Your success in this data-driven environment relies on your ability to integrate and transform your data enterprise-wide and beyond.
